

BIOGRAPHY

Dr. Steven Krahn
Vice President, Strategic Planning
Perot Systems Government Services

Dr. Krahn has more than 25 years of project, program and technical management experience split between the government and the private sector. His technical and project management highlights include technical leadership of safety oversight for an independent federal agency, chairing two independent safety review boards for Department of Energy (DOE) contractors, management of the \$140M maintenance availability of a nuclear submarine, management of the \$50M nuclear work package for two submarine maintenance availabilities, and the technical direction of the design and construction efforts for three major safety upgrades at DOE nuclear facilities.

Dr. Krahn is presently the Vice President for Strategic Planning at Perot Systems Government Services, where he leads the company's planning efforts, evaluation of acquisition candidates and development of service offerings. He also provides senior consulting services to the leadership of major DOE, Defense and Aerospace contractors. Prior to this stint in the private sector, Dr. Krahn was in the Senior Executive Service (SES) and served as the Deputy Technical Director and Chief Operating Officer of the Defense Nuclear Facilities Safety Board (DNFSB)—an independent agency tasked with safety oversight of the DOE's nuclear weapons complex.
